1. Product overview

Fig.1. FPV camera T640 CVBS USB (4mm)

The T640 CVBS USB (4mm) is an uncooled thermal imaging module designed for applications that require high reliability and ease of integration. Designed for use cases where safety, reliability, and ease of use are essential, the T640-9 uncooled thermal imaging module delivers strong performance with support for multiple serial communication and video output interfaces, plus an optional lightweight infrared lens. It suits micro-handheld devices, enhanced night vision goggles (ENVG), civilian drones, and advanced driver-assistance systems (ADAS), offering a complete thermal imaging solution.
